

SINEHAN

Software Developer | GenAI & Automation Engineering

Chennai, Tamil Nadu, India | sinehan001@gmail.com | +91 9884846075 | linkedin.com/in/sinehan001 | github.com/sinehan001

SUMMARY

Software Developer with 2+ years of experience building production Node.js backends, REST APIs, microservices, and automation solutions, working closely with cross-team stakeholders on integrations and releases. Hands-on with GenAI/LLM techniques, including a RAG pipeline with an LLM-to-SQL layer, vector search, and role-based access control. Strong experience in API integration, query optimization, production deployments, and CI-driven delivery.

TECHNICAL SKILLS

GenAI / LLM: LangChain, RAG pipelines, Vector DB (Weaviate), LLM-to-SQL, NLP, prompt-driven data validation, agentic workflow design

Languages: JavaScript (Node.js), TypeScript, SQL

Backend & Data: Node.js, RabbitMQ (microservices), PostgreSQL, MongoDB, REST API design & integration, query/index optimization

Frontend: React.js (production dashboard build)

Platform Automation: ServiceNow — Flow Designer, Business Rules, Script Includes

Engineering Practices: CI/CD pipelines, Git, Agile/Scrum, root-cause & failure-rate analysis, code review, Selenium (test automation)

EXPERIENCE

Software Developer — Sify Technologies Ltd

Jul 2024 – Present

Chennai, India

- Built and maintained production-grade Node.js REST APIs, handling API development, integration, debugging, performance optimization, and end-to-end request/response workflows.
- Developed Node.js microservices using RabbitMQ for high-volume bulk data processing; improved query performance through targeted indexing, aggregation pipeline tuning, and reduced dot-walk overhead.
- Own FRDB, an internal monitoring project, end-to-end: designed the PostgreSQL schema, built the Node.js backend services, and built the React.js frontend, including a real-time dashboard tracking API call volume and failure rates and a UI to trigger orders and inspect API responses.
- Led a Node.js runtime migration from v8.11.1 to v24.20.0 across production services with zero downtime, validating compatibility and dependency changes end-to-end.
- Built a GenAI RAG system with an LLM-to-SQL layer (read-only RBAC) and vector search over an internal knowledge base, enabling role-based natural-language queries that retrieve live customer and service data.
- Collaborated directly with internal systems teams to analyze requirements and integrate data flows between enterprise platforms.
- Configured PM2 cluster mode for Node.js services to utilize multiple CPU cores and improve application availability and throughput in production environments.
- Worked with Nginx as an upstream load balancer and reverse proxy, implementing URL-based API routing to distribute requests across backend services and application instances.
- Worked with AWS and Linux-based production environments, supporting application deployment, configuration, monitoring, and troubleshooting.
- Automated enterprise telecom workflows on ServiceNow using Flow Designer, Business Rules, and Script Includes, reducing manual process steps across cross-team operations.

ADDITIONAL PROJECT WORK

- MERN-stack applications built during coursework and personal projects — working familiarity with React fundamentals (hooks, component state, props) and full request/response lifecycle design.

CERTIFICATION

AWS Certified Developer – Associate | Amazon Web Services | 2024 – 2027

EDUCATION

B.E., Computer Science — Velammal Engineering College, Chennai

2024

- CGPA: 9.43 / 10
